

SPOT SKIN CANCER EARLIER

Comprehensive Mole Mapping Using
the Latest Technology Now Available at
Revere Health Dermatology

What is total body mole mapping?

Total body mole mapping is a computer-automated process that identifies changes in the skin over time. At Revere Health Dermatology, we use the FotoFinder system to create a unique mole map for each patient, which helps us spot skin cancer in its earliest stages when it is easiest to treat.

Benefits of mole mapping

- Long-term monitoring of moles on your body
- Comprehensive risk assessment and analysis
- Early detection and digital tracking
- Fewer unnecessary procedures
- No referral necessary
